Business Findings

Finding 1 — Overall performance
Revenue declined 25.66% from July to August, while transactions declined 40.98% and units sold declined 38.73%.

Finding 2 — Category driver
Computer and Networking revenue declined by \$13,282.99 combined, accounting for approximately 90.44% of the net revenue decline.

Finding 3 — Product driver
Mesh Wi-Fi System had the largest product-level revenue decline, decreasing by \$8,496.18 as units sold fell from 25 to 7.

Finding 4 — Positive offset
Office was the only category to increase revenue, growing by \$2,304.47 from July to August.

Recommended Investigation

Investigate the decline in Mesh Wi-Fi System and Computer/Networking performance, including inventory availability, pricing, promotions, product mix, and customer purchasing behavior. Additional data is required to determine the underlying causes.

Data Limitations

The analysis does not include customer IDs, historical inventory snapshots, promotion or campaign data, traffic data, competitor pricing, or product cost/margin information. Therefore, the analysis identifies patterns and investigation priorities but does not establish causation or profitability impact.
